

Maximising Operational Efficiency and Safety

FW10-V Series Filter/Water Separator

Filter/water separators consist of two stages designed to remove free water and particulates from aviation fuels at refineries, terminals, fuel depots and airports. FAUDI Aviation filter vessels incorporate flat sealed or threaded base elements and reusable separator elements.

FAUDI Aviation Coalescer and Separator

EI 1598 AFGUARD® Electronic Water Sensor (EWS) detects water in aviation fuel. It is recommended for use downstream of all filtration technologies to verify filter performance.

EI 1592 SLUGGUARD® electronic sensor to distinguish between aviation fuel and water. SLUGGUARD® monitors water in filter low points.
