Recertification has never been so easy
Industry-leading user experience and services, designed to boost business productivity. Once set up in the app, cloud-based sensor status automatically provides information for reporting and scheduling upcoming recertifications. Explore data, retrieve files and share insights.

Connected data and business processes
Establish a comprehensive data system enabling optimisation of the AFGUARD® sensor recertification processes and provide consistent, reliable views of the data.

Extensive partner network
Certified Servicers are experts in AFGUARD® servicing. They meet the highest standards in terms of service levels, qualification of technicians and availability of services at all times.

Turn data into insights, and insights into action
Streamline AFGUARD® recertification processes across business units. The app provides AFGUARD® recertification status and scheduling alerts, along with access to historic data.

1. Add AFGUARD® sensor
Sensors are registered in the app by serial number and location. Sensor status is determined automatically.

2. Request for recertification
Check the status of an AFGUARD® sensors, ship in time for recertification with all required documents provided via the app. Complete payment with vouchers from the FAUDI Aviation Voucher App.

3. Recertification successful
Successfully recertified AFGUARD® sensors are returned and the app automatically updates the new status and the associated certificate.
